

DJANGO (ITW 2)

AIRLINE MANAGEMENT SYSTEM

Django is a high-level Python web framework that encourages rapid development and clean, pragmatic design. Built by experienced developers, it takes care of much of the hassle of web development, so you can focus on writing your app without needing to reinvent the wheel.

Project in Django

We have used django to create a website for Airline management system

- An Airline Management System is a managerial software which targets to control all operations of an airline. All operations of an airline company are controlled by their airline management system.
- On this airline management system website, we provide services for the airline company to view and edit details related to their database.

 FLIGHT STATUS

 ADD FLIGHTS

 PASSENGER STATUS

 ADD PASSENGERS

Our home page has a navigation bar containing 4 tabs:

- HOME
- FLIGHT STATUS
- ADD FLIGHTS
- PASSENGER STATUS
- ADD PASSENGERS

We have added a Carousel and cards which tell us about the functions which we can perform on our website.

Services available on our site:
